🌐 y0anstmt

Third-year Computer Science student at Babeş-Bolyai University and aspiring Back-End Developer, with extensive practical experience gained during two internships at BMW TechWorks. Focused on building scalable software solutions and collaborative development within Agile environments. Passionate about clean software architecture and eager to apply engineering principles to complex challenges.

Professional Experience

BMW TechWorks

Software Development Intern

Cluj-Napoca

Nov 2025 – Present (exp. Jun 2026)

Returned for a second internship to continue contributing to critical backend systems.

- Deepening expertise in the **Java** ecosystem and mastering advanced backend architecture patterns.
- Contributing to the optimization and scalability of existing microservices using **Quarkus**.
- Ensuring high code quality by writing comprehensive unit tests (JUnit) and participating in code reviews.

BMW TechWorks

Software Development Intern

Cluj-Napoca

Jul 2025 – Aug 2025

Developed a back-end application for GDPR management and compliance within an Agile team.

- Implemented RESTful microservices using **Java** and **Quarkus**.
- Designed and optimized **PostgreSQL** data models and managed database migrations using **Flyway**.
- Managed project dependencies and build lifecycle with **Maven**.
- Collaborated on architecture design, system integration, and code reviews.

Education

Babeş-Bolyai University (UBB)

Bachelor's Degree in Computer Science (3rd Year)

Cluj-Napoca

2023 – Present

Key Courses: Algorithms, Data Structures, Databases, Operating Systems, Software Engineering.

"Stefan cel Mare" National College

High School Diploma (Mathematics & Computer Science)

Suceava

2019 – 2023

Intensive Computer Science Track.

Key Projects

Academic Team Project

Academic Management System

Nov 2025 – Jan 2026

Co-developed a web platform for managing academic records, similar to the university's "Academic Info" portal.

- Implemented distinct portals for **Professors** (grading, attendance tracking) and **Students** (viewing grades, absences).
- Designed a relational database to manage complex links between courses, students, and teachers.
- Collaborated within a team to ensure data consistency and secure user authentication.

Personal Project

Poker2Players (Java / JavaFX)

GitHub

Mar 2025

Interactive desktop poker game for two players, focusing on OOP principles.

- Designed complete game logic: card distribution, hand ranking hierarchies, and betting rounds.
- Developed the GUI using **JavaFX** and Scene Builder with custom animations.
- Implemented turn-based logic, input validation, and dynamic UI updates.

Academic Project

Network Simulation (Cisco Packet Tracer)

GitHub

Jan 2025

Led a 3-person team to design and simulate a hierarchical computer network topology.

- Configured routers, switches, and access points (wired and wireless).
- Implemented subnetting using VLSM and assigned IP ranges to multiple segments.
- Simulated DHCP, DNS, and Web servers to test communication reliability.

Technical Skills

- **Languages:** Java, C++, Python, PHP, JavaScript, HTML, C, SQL
- **Frameworks:** Quarkus, Hibernate, CodeIgniter, JavaFX, JUnit
- **Concepts:** Multithreading (Threads), OOP, REST APIs, Data Structures
- **Tools & DevOps:** Git, GitHub, Docker, Maven, Flyway, CI/CD Pipelines
- **Databases:** PostgreSQL, MySQL
- **Networking:** Cisco Packet Tracer (Network Design & Simulation)
- **Spoken Languages:** Romanian (Native), English (C1 - Professional), Spanish (B1), German (A2)
